

## How is InteGREATZ different?

Popular ERP solutions offer ERPs that are designed and implemented with a business logic that meets the low-cost promise, but are heavy on the purse in terms of services.

These ERP products have many possible configurations, which only increases the time and the cost of getting an ERP into production.

As a response to this situation, local ERP vendors have developed low-level, isolated programs as an alternative for SMEs. But these don't promise quality.

Today, plenty of SMEs around the world look for user-friendly, cost-effective, and plug-and-play ERP solutions-which large, established ERP vendors fail to provide.

### InteGREATZ ERP

**We at InteGREATZ ERP founded this company with a vision to design a product with zero service cost - Created a product that is ready to use from day one and that does not require intense training.**

We are aware that SMEs don't employ ERP proficient employees or have the luxury of time to train their employees using an ERP. That's why we at InteGREATZ have created an ERP solution that incorporates all the requirements of customers in the same product.

It ensures that all business process requirements are met from day one, and that with minimal customization, the product is ready for implementation.

Also, pre-configuration of masters with seed data minimizes implementation time to just two weeks.

InteGREATZ's ERP solution is pre-structured, and is easily understood by non-technical people.

**We treat ERP as a product, not a project. So there are no service charges and other variables, and that's exactly what lowers the ownership cost for SMEs, making it affordable.**
